### HIGH WATER LEVELS PREDICTED FOR LAKE SIMCOE

The Lake Simcoe Region Conservation Authority is advising that higher than normal water levels are predicted for Lake Simcoe and certain areas of the East Holland River for the late winter and early spring.

Due to the extensive mid-winter thaw that central and southern Ontario experienced in January of 2008, water levels in Lake Simcoe are higher than those normally expected at this time of year.

The Spring will bring us melting snow, rain and breakup of ice along our rivers, streams, ponds and lakes. During this time of year we can expect higher, faster flowing water within our rivers and streams. In addition, slippery and unstable stream banks and extremely cold water temperatures can lead to very hazardous conditions close to any water body.

Please exercise caution around any water body over the next few weeks and help make this a safe and enjoyable spring.

The Lake Simcoe Region Conservation Authority and the Town of East Gwillimbury will continue to monitor the situation and provide regular updates on the Town's website: [www.eastgwillimbury.ca](http://www.eastgwillimbury.ca).

For more information, links to important websites and up to date information please visit the Town's website or call 905-478-4282 ext.3812.
