

Town of  
**East Gwillimbury**

## **NOTICE OF AERIAL APPLICATION OF LARVICIDE TO CONTROL LARVAL MOSQUITOES**

A vast percentage of land in East Gwillimbury is low-lying terrain, creating perfect breeding sites for the Spring Aedes Mosquito. Breeding habitat is found in standing water areas such as woodlands, field pools and ditches that form as the snow melts and spring rains occur.

Beginning approximately April 1st, 2020 weather permitting and ending May 31<sup>st</sup>, 2020 the biological larvicide VectoBac 200G [PCP#18158, granular formulation] will be applied by helicopter to standing water mosquito breeding habitat within the Town of East Gwillimbury. This product contains the active ingredient *B.t.i.* which is very specific to mosquito larvae. Mortality results within 24 hours and biodegrades within 72 hours.

A map showing the treatment areas is available for viewing at the Civic Centre, 19000 Leslie Street, Sharon and at [www.eastgwillimbury.ca/mosquito](http://www.eastgwillimbury.ca/mosquito). If you **object** to having VectoBac applied to your property, you must complete and return the Objection Form below by **Monday, March 30, 2020**. No response is required if you support the mosquito control program.

Sincerely,  
David Dodwell, Environmental Technologist  
(905) 478-4283 ext. 1296
